

FIT INTEGRATION SERVICES

REACT QUICKLY – ANY TIME, ANY PLACE

CONNECTING HETEROGENEOUS SYSTEM ENVIRONMENTS

What are FIT Integration Services?

FIT Integration Services provide extensive integration solutions for comprehensive integration of processes within a company, and between business partners and applications. An experienced consulting team configures, operates and supports the processes. Integration Services are the result of FIT's many years experience working with midsize business, its extensive expertise as full-service IT provider, and its clear understanding of business process structures.

The Challenge

Data traffic between companies is characterized by distributed, heterogeneous IT environments with numerous applications, connected with each other over highly-complex networks. This makes implementing standardized system solutions, uniform business processes and efficient data exchange in the B2B area no ordinary service. On the one hand, implementation must consider the applications related to the internal data flow. On the other hand, it must also deal with all applications regulating information exchange between customers and business partners. Such process optimization is vital to staying competitive. FIT provides you with the Integration Services you need for consolidation of storage and transfer of your data and for structuring and standardizing your business processes.

The Solution

FIT Integration Services comprise four separate service offerings. They all reliably implement integration of data, applications and system solutions in the desired company infrastructure. All four solutions ensure a high coverage of functions and optimize processes consistently.

■ **FIT SAP XI Services** (SAP NetWeaver Exchange Infrastructure) solution implements internal company and inter-company business processes on a standardized platform. FIT SAP XI Services create integration scenarios based on Web services and standardize heterogeneous interfaces throughout the entire IT infrastructure. This guarantees stable operation of a centrally scalable system, and thus process optimization along the entire value-added chain.

■ **FIT EDI Services** (Electronic Data Interchange) introduce electronic procedures for fully automated data exchange between customer and supplier ERP systems. FIT EDI Services support all common message formats for orders, warehouse movements, delivery calls and invoices. FIT EDI Services thus enable a seamless and consistent integration of business processes, linking up all business partners centrally.

■ Companies can use **FIT WebEDI Services** to provide their suppliers with a low-cost solution for participating in electronic data exchange using Web-based entry masks. This helps to do

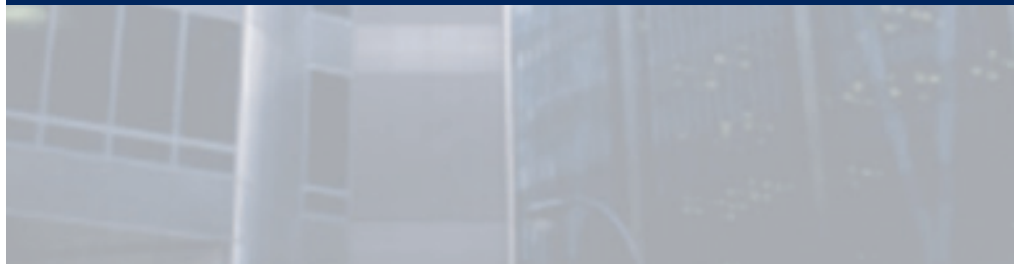

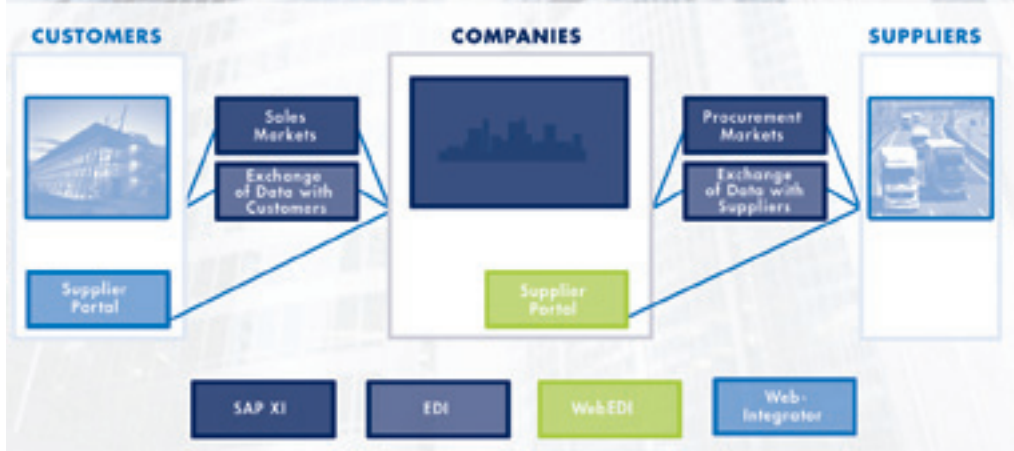

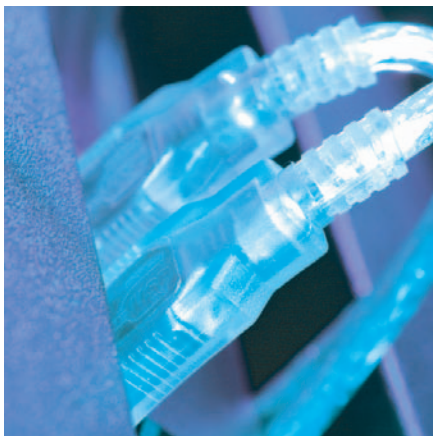

away with the added effort of manual data entry, together with costs resulting from incorrect entries.

■ **FIT WebIntegrator Services** standardize browser-based B2B processes that are otherwise only operated manually and thus unstructured. This means that, for instance, requests for proposals, supplier assessments, complaints and quality reports can be automatically transferred to the respective backend system. FIT WebIntegrator Services thus help to establish secure and integrated transfer of data from the Internet and other online services to the company's own applications and vice versa.

The Key to Success

FIT Integration Services provide extensive solutions for business integration and are the result of FIT's many years of experience with midsize business. They reflect the comprehensive process knowledge and clear understanding of business structures that distinguish FIT as a reliable and competent full-service IT provider.

Main Advantages

FIT Integration Services provide extensive support for the implementation, maintenance and optimization of high-performance integration scenarios. They standardize heterogeneous system environments and decisively reduce process costs. Flexible deployment of FIT Integration Services leads to risk minimization through creating stable, integrated business processes. All four solutions are available as an ASP service, saving customers from having to invest in hardware, software or expertise. The solutions are operated centrally in FIT's data centers.

Target Group

All companies aiming for complete, cross-company integration of their business processes and looking to use standardized communication channels and system solutions to link up business partners and customers.

FIT Integration Services highlights

- Extensive solutions for business integration
- In-depth knowledge of different sectors and relevant processes
- Consistent, integrated business processes
- Cost savings through optimized processes
- Integration solution offered as an ASP service
- SAP-certified data center operation
